

PARTNER OVERVIEWS

1Spatial

1Spatial provides market leading data quality and data engineering solutions to public and private sector organisations that handle high volumes of business critical data and need to trust their location-based information. Our rules-driven approach enables the automation of business processes and results in significant increases in efficiency and reduced costs, allowing customers to produce more using fewer resources.

As a business, we pride ourselves on developing long term, mutually beneficial relationships with our key customers, ensuring they get the most they can from their GIS and location data. We believe we can deliver certainty in your decision making in our changing world.

Association for Geographic Information

Established in 1989 with 2000 named members, the AGI exists to represent the interests of the UK's geographic information (GI) industry; a wide-ranging group of public and private sector organisations, suppliers of GI software, hardware, data and services, consultants, academics and interested individuals. The AGI:

- Provides a focus for the GI community
- Promotes value and benefit of GI
- Represents the GI community to policy makers
- Fosters appropriate GI standards
- Encourages best practice and innovation
- Promotes training, education and continuing professional development (CPD)
- Provides wide ranging and relevant member benefits

Beacon Dodsworth

Beacon Dodsworth is a data and software consultancy that provides geographic information system (GIS) mapping software and marketing technology to a diverse range of industries, from media and retail to health and the public sector. The software allows clients to quickly and easily analyse and map data, simulate drive times and visualise mapping online. The packages can be implemented as standard or tailored to meet specific client requirements. Beacon Dodsworth also sells demographic, boundary and census data for use in other mapping software packages and provides a bureau service, performing the analysis and mapping on behalf of their clients.

British Geological Survey (BGS)

The British Geological Survey (BGS) is the national centre for geological information, providing impartial advice and data to clients. Many BGS databases are now available under licence in digital format, ready for GIS applications, in addition to a range of interpreted data delivered through the GeoReports service. Digital information available includes geology maps, ground stability datasets, and minerals resource information, alongside a wide range of other datasets. BGS also designs detailed 3D geological models to meet customers' specifications which show geology in an easily understandable format.

Compass Informatics

Compass Informatics is an Information and Communications Technologies (ICT) consultancy specialising in expert GIS technologies – an expert and niche systems integrator.

Compass products include:

- High quality webmap viewers (Esri and Open Source)
- Hosted SDI solutions
- Smartphone GIS apps

And also...

- Bioenergy mapping and modelling information systems
- Biodiversity mapping information systems
- Pavement management systems
- Land and asset mapping information systems

Compass provides a suite of integrated spatial & information management services including:

- Systems Development
- GIS & Data Services
- Planning Services

The company is headquartered in Blackrock, Dublin, Ireland, with a London office and with significant enterprise projects across the UK and Ireland. We are Esri, Ashtech, Handheld Europe dealers while also focussed on open source options coupled typically with .Net development.
